

#zs113 : Not A Peer-to-Peer Electronic Cash System July, Loop Year 22

~~Mon Sep 30 2024~~ X 🦴

Saara Kanamoto
email is 1987

Abstract. There's nothing abstract about a pynk paper.

1. Introduction

This is not a white paper. It's pynk. In other words, this paper is not real.

As you may not know, millions of Cybrcitizens hold a parasocial relationship with a fictitious entity known as Satoshi Nakamoto, the name behind attached to the once widely circulated white paper titled "Bitcoin: A Peer-to-Peer Electronic Cash System." As in 2008.

As you read this, the entire Bitcoin thing is valued in the billions. Not bad for a 9-page white paper, assuming you still value money.

Before you continue, there are 113 reasons to be reading this pynk paper. Then again, there are 0 reasons if you have already escaped The Time is Money Trap.™ How do you know if you're stuck inside The Time is Money Trap™? If you look at your calendar and the year reads 2024, you're a shoe in.

2. Transactions

Let's say you want to get with a new currency that, unlike Bitcoin, has a shot at being revolutionary. Well, it's you, sweetheart, not the currency. The currency lives inside you. The currency and how it moves is just a reflection of your abundance consciousness or lack thereof. Just keep in mind, the Universe only knows abundance. There's no such thing as a lack of abundance. In the matrix, you are attuned to an abundance of lack. And that keeps you stuck in The Trap™. And we digress.

So you want a currency that truly lives "outside the matrix." In that case, before you proceed another penny, you ought know the best way to ruin all chances of revolutionary.

The best way to ensure your new currency is not a game changer is to measure your brand new currency in dollars. In other words, give it an exchange rate or price. In other other words, if you design your currency such that anyone off the street can buy and sell your new coins for U\$D, you have created something. And that something is not revolutionary. Why not? Because it, by definition, carries forth the precise consciousness as the old. Garbage in, garbage out continues.

On that note, nothing in this pink paper is rocket science. However, even top rocket scientists don't see it.

Hey. Thanks for tuning in. You're still here so let's play with this further.

You wake up tomorrow morning and decide to make a new currency. You call it Flipcoin. You spend an hour crafting a spreadsheet so you can give people Flipcoin and help them track who has what.

Then, you get fancy and design the system so that that everyone who is playing with Flipcoin has their own copy of the spreadsheet. So there's no central authority and everyone can rest at night knowing that nobody is in control. And with a little help from AI, your fancy spreadsheet system is flawless and keeps everyone in sync. In the 2024X, this is known as "decentralized". You have a decentralized spreadsheet that just magically copies itself everywhere and keeps track and nobody owns it. Like a magic scoreboard that floats about in the cloud.

Next, you order a couple of cheese pizzas from Papa John's and roll some dice. You roll 25 and so you decide, 1 Flipcoin is worth \$0.25 which is nice because it reminds you of Pac Man. So, like magically assigning a value to a poker chip, you just decide. \$0.25 for one chip (Flipcoin).

Finally, you declare the game has a total of 10,000 Flipcoins and the game is on.

Now the easy part. Find a group of people to play along. So you tweet and promise some riches. Boom. Anyone can buy in to your game for \$0.25 per Flipcoin. And anyone can cash out for \$0.25 per Flipcoin unless, of course, the game takes off and the value magically goes up.

Of course it's going to go up. Everybody is going to love Flipcoin. It's going to be better than the last big thing. It's going to be huge. There will be so much demand for getting in on the exciting game of Flipcoin that, for reasons nobody can put into words, people will pay higher and higher prices to get in.

But, you decide to start humble just to hook them in. A \$0.25 exchange rate. Buy as many Flipcoins as you want, pass them around, then cash out. That's the game. There is, quite literally, nothing to Flipcoin. Smoke and mirrors at its finest.

Here's where we were taking this.

There's nothing inherently wrong with the Flipcoin approach. The Flipcoin dynamics are precisely the same as Bitcoin and every other Cybercurrency (crypto). The only difference is they (the matrix) calls it a "market price" instead of an "exchange rate". Exchange U\$D for poker chips (coins) to get into the game, exchange poker chips (coins) for U\$D to get out. You can see the [prices here](#).

And, thanks to Satoshi Nakamoto, the underlying technology behind Crypto is like a big spreadsheet with some magic properties. It's called blockchain. But it's just that. A smagic preadsheet in the sky that grows and grows and grows forever and gets copied over and over and over to give the grand illusion that the game

has lots of value. If it didn't, Bitcoin would not have a cult following. And we aren't saying it does.

In all cases, as previously stated, the moment you have an exchange rate in \$, you have eliminated all possibility of creating anything revolutionary. You have not invented a game changer. In fact, you have not even created a new game. You have merely created a plug-in extension to the tired matrix OS game known as The Time is Money Trap™.

So Flipcoin, like any Cybercurrency with an exchange rate is nothing new. It's just money. Which is fine. But you're still stuck inside The Trap™ that's humming along at the 1260 frequency.

12. Conclusion

This pink paper never gets published because it's never done. It's a "living document", if you will. And even if you won't, it is sourced outside of Cyberspace™.

This pink paper has an IZ address. 1727:6:75:113. It's a timestamp. So you are synchronizing with a glimpse of the paper at some mysterious point in Earth timespace. Thing is... it's already out of date. And this may be our last transmission.

Less isn't more.

Less is everything.
